

# TRIDENT

## Consensus Risk Mitigation & Sub-Contracting

Zffbe!!kagfgZWFHY\* &Q-Z K? 1e/]: E[5BI Uh6J%I

### Unlock a Comprehensive Risk Management Solution for Government Contracts

Trident is a single platform that streamlines financial health risk analysis, real-time cybersecurity threat assessment, and global workforce vetting—specifically designed for government contracting.

More than just software, Trident delivers clear, actionable risk assessments of your key subcontractors, boosting efficiency and giving you a competitive edge.

Large prime contractors can seamlessly integrate it into their workflows, while government agencies can deploy it directly for enhanced contract oversight.

1

### FINANCIAL RISK ANALYSIS

Our financial risk analysis helps government contractors assess the financial health of their subcontractors, reducing the risk of project delays or failures due to insolvency. By providing objective, data-driven insights into a company's financial stability, it enables prime contractors and government agencies to make informed decisions, ensure compliance, and mitigate supply chain disruptions. This proactive approach enhances contract oversight and strengthens risk management in government subcontracting.

2

### CYBERSECURITY

Our dark web cybersecurity analysis helps government contractors identify potential threats by monitoring illicit forums, data breaches, and cybercriminal activities targeting subcontractors. By uncovering hidden risks such as compromised credentials, insider threats, and supply chain vulnerabilities, it enables proactive mitigation strategies. This enhances cybersecurity resilience, protects sensitive government projects, and ensures compliance with strict security requirements in subcontracting.

3

### FOREIGN OWNERSHIP, CONTROL AND INFLUENCE MANAGEMENT (FOCI)

Our FOCI management analysis helps government contractors assess the risks associated with foreign ties in their subcontractor network. By mapping company ownership structures and identifying potential foreign influence, it ensures compliance with federal regulations and mitigates national security threats. This proactive approach enhances supply chain security, protects sensitive government projects, and supports informed decision-making in subcontracting.

## ABOUT US

### WHO ARE WE?

Comprised of 60% veterans, we deliver the best solutions for our customers with a full range of highly competitive technology products and services. We desire to be the provider of choice for the U.S. Government and Commercial Community, as well as America's allies overseas.
